

### The Workliday

I have invented the word *Workliday*. The word is made up using the words *work* and *holiday*. The thing is these days how many of us actually switch off from the office when we go on holiday? The answer is probably very few people completely switch off. With the arrival of laptops, Blackberrys and now tablets, and the easy access most people have to the internet, makes it irresistible not to turn off completely. It's like a drug, a compulsion. We must access our emails or we might miss something. When we do check our emails we find probably not much has changed. However, there could be that important decision we are waiting on that could change our lives forever. Nevertheless, there are many professional workers who simply can't switch off when they take a break. They must take their mobile phone or tablet with them.

These days it is vital for some people to keep in touch with the office. People have to stay connected. They are completely lost without fiddling with something electronic. It is quite pathetic. I mean, can't the office manage without them for a few days? Whatever happened to the annual two week holiday when people actually did switch off from their job? Today people go for a walk by the sea then rush back to check their emails! However, many would say it is the age we live in. It is a must when on holiday to communicate with the office or to our friends via Facebook or Skype. Many professional people these days work from home. They can sit in the garden or on the terrace and do their work on their laptop, then email it to the office. The internet has revolutionised how we work. People who work in offices do need to recharge their batteries so taking a break is important. This applies especially to those who work fixed hours i.e. 9-5. But those people who work from home aren't under the same stress. Maybe there is less travelling to do i.e. just a weekly trip to the office. These days' people can adapt their work time and work at different time periods during the day.

This English lesson is a good example of all this. I write this in the early morning and will complete it in the evening during the school holidays. My job dictates that after a weekend away the first thing I must do is to check my emails. My mobile phone is normally on – just in case! How about you?
